AcSoft

ACOUSTIC & VIBRATION ANALYSIS SYSTEMS

Welcome to the AcSoft Home Page!

Our mission in life is to provide the best in sound & vibration measurement systems, using flexible computing platforms, and user friendly software.

Over the last three years, we have put together a fine range of systems from mainly European suppliers, which, coupled with application advice and technical support, makes solving your noise & vibration problems so much easier.

Over the next few pages, you will find introductions for each main application, and overviews of our measurement solutions. For latest updates go straight to the [News Page](#).

Thanks for dropping in and we hope to hear from you soon!

PS - the Spectra software downloads are [HERE!](#)

Technical Note : We have tried to make our pages readable by a wide range of browsers, but to improve appearance, heavy use is made of tables. We've had reports of early versions of Netscape having indigestion with these pages - you may want to disable the graphics to get it to work. Also, you will benefit if your display is set to 800x600 or greater. For best effects, we recommend Internet Explorer. Love 'em or hate 'em, Microsoft do write pretty good software in their quest to take over the world and the best thing about IE3.0 is that it's FREE. Download it now by clicking on the icon below.

We were very excited to be invited to record and measure the engine noise of the last flying Vulcan at an engine test in March this year. Unfortunately, this might be its last year flying as it costs an incredible amount to keep this magnificent machine in the air. We made binaural recordings of the engine test using an artificial head system

**Outgrowing our office in

One of the UK's leading suppliers of noise, vibration and air quality monitoring systems

AcSoft and Svantek UK are leading suppliers of sound, vibration and air quality measurement equipment and software for professional applications. For nearly 30 years we have been providing a service where we put customers at the very heart of what we do. Our in house technical support team are always on hand to help with any noise or vibration monitoring projects you need support with, and our in house calibration lab offer a fast and reliable traceable calibration service.

As prominent experts in the field of noise and vibration monitoring, we supply instrumentation and software for a range of applications, including: environmental noise monitoring, building and ground vibration, human vibration, occupational noise, human vibration, air quality monitoring and more.

We put our mission statement at the very heart of what we do: To provide an unparalleled customer experience to acoustics professionals, whilst saving them time and resources.

Our website was rebuilt **from the ground up** to what you see today

Within 2 Years, we had outgrown our single office, we had to **expand to a second building**

2024

2024

At this time we had a total of **21 employees**

Present Day

AcSoft has continued to provide complementary systems, into automotive, military and aerospace, whilst providing services such as calibration, training and system integration.

Based at the new offices in Bedford, more than 20 employees work as a team to fulfil the same objectives as when the company was formed 30 years ago.
